The `sidenotes` package*

Andy Thomas
andythomas(at)web.de
March 24, 2020

Abstract

This package allows the typesetting of rich content in the margin. It includes text, but also figures, captions, tables and citations, which is common in science textbooks such as Feynman’s Lectures on Physics.

Contents

1 Usage 1
2 Technical note 2
3 Required packages 2
4 Implementation 3

1 Usage

\sidenote The macro is very similar to the footnote macro and tries to emulate its behavior. It just puts the notes in the margin instead of the bottom of the page, therefore the name `sidenote`. It has the same parameters as footnote as well as an additional offset: `\sidenote[number][offset]{text}`. All the sidenotes are subsequently numbered and float in the margin to avoid overlap. The first, optional parameter will manually change the numbering to the given value. The second offset parameter will fix the text at a certain position in the margin. In particular, there is a difference between not providing an offset (floating text) and an offset of 0 (fix text at actual position).

\sidenotemark Sidenote tries to mimic the footnote behavior and, consequently, provides the same solutions. Sometimes, it is not possible to directly call a sidenote macro, e.g. inside of a figure caption. Then, you can use `\sidenotemark[number]` and `\sidenotetext[number][offset]{text}` macros. `\sidenotemark` puts a mark

---

*This document corresponds to sidenotes v1.00, dated 2016/04/21. Earlier versions by Oliver Schebaum.
at the current position. Afterwards, outside of the environment that causes the
trouble, it is possible the call \sidenotetext[number][offset]{text} to provide
the text and typeset the sidenote. The optional parameters are similar to the
sidenote macro. The first, optional parameter will change the numbering and the
offset will change the position.

\sidecaption

The \sidecaption[entry][offset]{text} macro can be used if the caption
of a figure or table should be in the margin. The caption has to be adjacent to the
figure, so a float is not an option here. Therefore, the caption might overlap with
other marginals. Then, these marginals have to be adjusted with offset para-
ters. The formatting of the caption is done by the caption package by defining a
sidecaption style. Please refer to the documentation of the caption package for
information on styles. The macro can be starred, which is analog to the regular
starred caption (no numbering, no tof entry): \sidecaption*[offset]{text}.

marginfigure

The marginfigure environment puts a figure and its caption in the margin.
Instead of \begin{figure}[htbp] use \begin{marginfigure}[offset]. Again,
using an offset value switches the behavior from float to fixed position. The
marginfigure has its own caption style named marginfigure.

margintable

The margintable environment works similar to marginfigure, but with table en-
vironments. Use \begin{margintable}[offset] instead of \begin{table}[htbp],
its caption style is named margintable.

figure*

The figure* environment is used to position figures across the full page, i.e.
the text width plus the margin. The algorithm has to distinguish between recto
and verso (left and right) pages and might need up to three \LaTeX{} runs to provide
the desired result. The corresponding caption style is called widefigure. The sister
environment for tables is table*. Use widetable to change its caption style.

2 Technical note

When writing the package, we tried to provide a minimum extension to standard
\LaTeX{} for typesetting rich content in the margin. This means, that there are
no sensible default values for most things such as page geometry, fonts and font
sizes. However, the \texttt{caesar-book}-class accompanies this package as an example
implementation as well as a template we use for our theses.

In addition, we tried to keep compatibility with packages the user might want
to use later. However, the following packages are needed by sidenotes and might
introduce side effects with other packages.

3 Required packages

\marginnote supports an alternative to \marginpar and creates notes in the mar-
gin. The notes are not floats and can be shifted up or down. Technically, ev-
ery time an offset is provided the package uses \marginnote and \marginpar
otherwise.
The \texttt{xparse} package is used to take advantage of the improved L\LaTeX\textsc{3} syntax. All macros and environments are defined using this package.

\texttt{l3keys2e} provides a key/value mechanism.

\texttt{changepage} is used to correctly shift figure* and table*. It has to use the option [strict] to work properly. This might lead to an option clash, if the same package is loaded without this option.

### 4 Implementation

Process the package options: onside

\begin{verbatim}
\ExplSyntaxOn
\keys_define:nn { sidenotes }
  { oneside .bool_set:N = \sidenotes_oneside }
\ProcessKeysOptions { sidenotes }

We need a counter similar to the footnote counter.

\newcounter{sidenote} % make a counter
\setcounter{sidenote}{1} % init the counter

The L\LaTeX\textsc{3} parts concerning the optional arguments should not distinguish between an empty bracket pair and no optional argument. This is required to keep macros with two leading optional arguments.

\DeclareExpandableDocumentCommand{\IfNoValueOrEmptyTF}{m m m}
  { \IfNoValueTF{#1}{#2}{\tl_if_empty:nTF {#1} {#2} {#3}} }

Put a marker in the horizontal list to detect subsequent sidenotemarks.

\NewDocumentCommand \@sidenotes@thesidenotemark { m }
  { \leavevmode
    \ifhmode
      \edef \@x@sf { \the \spacefactor }
      \nobreak
    \fi
    \hbox { \@textsuperscript { \normalfont #1 } }
  }
\end{verbatim}
\spacefactor \@x@sf 
\fi 
\relax 
}
\% 
\NewDocumentCommand \sidenotes@multisign { } {3sp}
\% 
\NewDocumentCommand \sidenotes@multimarker { }
{
\kern-\@sidenotes@multisign
\kern\@sidenotes@multisign\relax
}
\%
\NewDocumentCommand \sidenotes@multichecker { }
{
\dim_compare:nNnTF \lastkern = \@sidenotes@multisign 
{\sidenotes@thesidenotemark{,}}
{ }
\}
\%

Introduce an internal macro to place the marginal text. Use margin note in case
an offset is given and marginpar otherwise.
\NewDocumentCommand \sidenotes@placemarginal { m m }
{
\IfNoValueOrEmptyTF{#1}
{\marginpar{#2}}
{\marginnote{#2}[#1]}
}
\%

\sidenote
Introduce the \sidenote macro with two optional arguments to set the number
and the offset.
\NewDocumentCommand \sidenote { o o +m }
{
\sidenotemark[#1]
\sidenotetext[#1][#2][#3]
\@sidenotes@multimarker
}
\%

\sidenotemark
Sidenotemark is supposed to work similarly to footnotemark.
\NewDocumentCommand \sidenotemark { o }
{
\@sidenotes@multichecker
\IfNoValueOrEmptyTF{#1}
{\@sidenotes@thesidenotemark{\thesidenote}}
{\@sidenotes@thesidenotemark[#1]}
\@sidenotes@multimarker
}
\sidecaption Sidenotetext is supposed to work similarly to footnotetext. The additional, optional argument sets the offset.
66 \NewDocumentCommand \sidenotetext { o o +m }
67 {  
68 \IfNoValueOrEmptyTF{#1}
69 {  
70  \@sidenotes@placemarginal{#2}{\textsuperscript{\thesidenote}{}~#3}
71  \refstepcounter{sidenote}
72  }
73  {\@sidenotes@placemarginal{#2}{\textsuperscript{#1}~#3}}
74 }

\sidecaption Sidecaption puts the caption in the margin. It never floats with the other text in the margin, since it has to be next to the figure. Sidecaption* works similarly to sidecaption, but without an entry.
75 \DeclareCaptionStyle{sidecaption}{font=footnotesize}
76 \NewDocumentCommand \sidecaption {s o o m}
77 {  
78 \captionsetup{style=sidecaption}
79 \IfBooleanTF{#1}
80 { % starred
81  \IfNoValueOrEmptyTF{#2}
82  {\marginnote{\caption*{#4}}}
83  {\marginnote{\caption*{#4}}[#2]}
84  }
85  { % unstarred
86  \IfNoValueOrEmptyTF{#2}
87  {\def\@sidenotes@sidecaption@tof{#4}}
88  {\def\@sidenotes@sidecaption@tof{#2}}
89  \IfNoValueOrEmptyTF{#3}
90  {\marginnote{\caption{\@sidenotes@sidecaption@tof}{#4}}}
91  {\marginnote{\caption{\@sidenotes@sidecaption@tof}{#4}}[#3]}
92  }
93 }

\marginfigure The marginfigure environment is similar to the figure environment. But the figure is put in the margin.
94 \newsavebox{\@sidenotes@marginfigurebox}
95 \DeclareCaptionStyle{marginfigure}{font=footnotesize}
96 \NewDocumentEnvironment{marginfigure} { o }
97 {  
98 \begin{lrbox}{\@sidenotes@marginfigurebox}
99 \begin{minipage}{\marginparwidth}
100 \captionsetup{type=figure,style=marginfigure}
101 \end{minipage}
102 \end{lrbox}
103 \end{minipage}%%
104 \end{lrbox}%%
The margintable is similar to the table environment. But the table is put in the margin.

\begin{lrbox}{\@sidenotes@margintablebox}
\begin{minipage}{\marginparwidth}
\captionsetup{type=table,style=margintable}
\end{minipage}
\end{lrbox}
\@sidenotes@placemarginal{#1}{\usebox{\@sidenotes@margintablebox}}

The figure* environment provides a figure environment for figures that span across the full page (text plus margin width).

\begin{lrbox}{\@sidenotes@margintablebox}
\begin{minipage}{\marginparwidth}
\captionsetup{type=table,style=margintable}
\end{minipage}
\end{lrbox}
\@sidenotes@placemarginal{#1}{\usebox{\@sidenotes@margintablebox}}

\begin{lrbox}{\@sidenotes@margintablebox}
\begin{minipage}{\marginparwidth}
\captionsetup{type=table,style=margintable}
\end{minipage}
\end{lrbox}
\@sidenotes@placemarginal{#1}{\usebox{\@sidenotes@margintablebox}}
The table* environment provides a table environment for figures across text and margin width.

\begin{table}[htbp]
\begin{autoadjustwidth}{}{-\@sidenotes@extrawidth}
\captionsetup{style=widetable}
\end{autoadjustwidth}
\end{table}

Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
